

COMPANY PROFILE

Company Profile & Capabilities

Boabat Alnoor Company

Oil & Gas EPC / EPCC Contractor in Iraq

Electrical | Instrumentation | Automation | Mechanical
Civil & Structural | Power Systems | Commissioning & Testing

Established 2009 | Basra, Iraq | Serving major oil & gas operators and hydrocarbon facilities

2026

Table of Contents

An executive overview of BN capabilities, delivery resources, and oil & gas project experience.

01	Corporate profile & client confidence	03-04
02	Integrated services portfolio & EPCC model	05-06
03	Technical disciplines and specialist capabilities	07-16
04	HSE, quality, organization and project delivery governance	17-22
05	Facilities, workshops and operating footprint	23-40
06	Equipment, machinery and testing resources	41-47
07	Major contracts and selected experience	48-53
08	Market position, growth plan and contact details	54-56

Company at a glance

A Basra-based EPCC and oilfield services contractor with proven delivery inside operating facilities.

BN Company is an Iraqi limited company established in 2009 and headquartered in Basra. We deliver integrated EPCC, construction, maintenance, automation, testing and commissioning services for oil and gas clients, covering electrical, instrumentation, mechanical, composite repair, civil/structural, power generation and industrial facilities.

2009

Established

Basra

Head Office

850+

Personnel

240M+

USD portfolio

Industry focus

Oilfield power infrastructure, hydrocarbon facilities, substations, wellpads, camps and workshops.

Delivery footprint

Operating presence and support bases in Rumaila and Zubair with rapid mobilization.

Core promise

Safe execution, schedule control, quality handover and practical field responsiveness.

BN capabilities with major contracts

The profile is positioned around contract scale, field readiness, single-point accountability and documented handover.

01 Large-contract readiness

Experience on multi-year EPC and Call Off scopes across Zubair, Rumaila and Ratawi.

02 Multidisciplinary execution

Civil, structural, electrical, automation, instrumentation, mechanical, generators and specialist repairs.

03 Oilfield operating discipline

PTW, SIMOPS, LOTO, QA/QC, HSE controls and client handover documentation.

04 Local logistics strength

Permanent facilities, workshops, fleet, camps and local resources in Basra oilfield areas.

Integrated services portfolio

A complete contracting capability for oil & gas from engineering through handover.

01 Integrated EPCC

Engineering, procurement, construction, commissioning and close-out.

03 Electrical & Power

HV/MV/LV systems, substations, switchgear, transformers and cabling.

05 Mechanical & Piping

Equipment support, piping, tankage, auxiliaries and field maintenance.

07 Power Plant Generators

300-1250 kVA packages, synchronization, PM/CM and workshop support.

02 Civil & Structural

Earthworks, foundations, buildings, trenches, steel and maintenance works.

04 Automation & Controls

PLC/SCADA support, panels, I/O checks, loop checks and commissioning.

06 Composite Repair

Engineered cold-applied repair for pipelines and pressure vessels.

08 Testing & Commissioning

Diagnostics, protection testing, energization and handover dossiers.

Single-point accountability: engineering - procurement - construction - testing - commissioning - maintenance - close-out dossiers

Integrated EPCC contract execution

Engineering, procurement, construction and commissioning for oilfield power and infrastructure packages.

- Full lifecycle delivery from technical review and planning through construction and handover.
- Workpack preparation, procurement coordination, construction supervision and vendor/interface management.
- Brownfield work execution inside hydrocarbon facilities under permit-to-work controls.
- Integrated planning, cost control, QA/QC inspection, HSE management and client reporting.

EPCC

Delivery model

Oil & Gas

Operating environment

Basra

Local execution base

Civil, structural and infrastructure works

Earthworks, concrete, foundations, trenches, buildings, steel structures, supports and maintenance works.

General civil construction and maintenance works under Eni Iraq contract 5000024314.
Excavation, backfilling, compaction, concrete works, foundations, paving and site restoration.
Structural steel erection, equipment supports, pipe-racks, access platforms and miscellaneous steelwork.
Cable trenches, duct banks, road crossings, pits, culverts, grounding pits and underground services.
Execution supported by BN facilities, batch plant capability, equipment and oilfield crews.

Civil contract included: 5000024314 - General Civil Construction & Maintenance Works | Eni Iraq B.V. | Zubair Oilfield | USD 8M | Ongoing

Electrical & power distribution

HV/MV/LV power systems, substations, switchgear, transformers, cabling and energization support.

33/11 kV GIS/AIS switchgear, RMUs, LV boards, MCCs, transformers, UPS/DC and VSD systems.
Cable route surveys, containment, duct banks, ladder/tray installation, pulling, dressing and tagging.
HV/MV/LV glanding, termination, jointing and cable testing with complete handover packages.
Earthing, lightning protection, power-quality logging and feeder tie-ins with client approval process.
Experience across Rumaila, Zubair and Ratawi power distribution and ESP infrastructure.

400+ km

HV/MV cables

33 kV

OHL / RMU / switchgear

24/7

Field support

Instrumentation, automation & controls

Controls, automation, instrumentation and field commissioning support for process and power systems.

PLC/SCADA panels, control cabinets, marshalling, field junction boxes and signal interfaces.
Instrument installation, loop checks, calibration, impulse tubing, cable termination and tagging.
Automation integration support for generators, synchronization panels, VSDs and control logic.
Point-to-point checks, functional testing, cause-and-effect verification and commissioning records.
Use of calibrated instruments, competent technicians and structured QA/QC documentation.

PLC / SCADA

Automation support

Loop checks

Instrumentation

Calibration

Traceable records

Mechanical, piping & static equipment support

Mechanical construction, piping support, tankage, generator auxiliaries and field maintenance services.

Mechanical installation works for plant equipment, supports, skids and auxiliary systems.
Piping tie-ins, pipe supports, valve installation, insulation support and field mechanical assistance.
Fuel tanks, generator auxiliaries, fuel filtration/polishing systems and rotating equipment support.
Maintenance, overhaul support and troubleshooting for power stations and hydrocarbon facilities.
Coordination with civil, E&I and commissioning teams for integrated project delivery.

300-1250 kVA

Generator packages

Static assets

Tanks & supports

Field crews

Mechanical support

Composite repair & asset integrity

Engineered cold-applied composite repair for pipelines, pressure vessels and structural reinforcement.

Assessment, engineered repair design, field application and close-out documentation.
Suitable for corrosion, erosion, dents, gouges, vessel reinforcement and complex geometries subject to engineering review.
Cold-applied systems help reduce hot work and outage time where technically applicable.
Repair design aligned with ASME PCC-2 / ISO 24817 principles and partner technology support.
Selected references include DS8 102-inch upper vessel, DS7 balance vessel and 36-inch pipeline repair.

ASME PCC-2

Design basis

ISO 24817

Repair principles

WQ1 / Basra

Local execution

Composite repair workflow and quality controls

A controlled field process from assessment through engineered repair, application and close-out.

01 Site survey & defect assessment

Controlled by repair design, ITP, material traceability and client approval requirements.

02 Engineering design package

Controlled by repair design, ITP, material traceability and client approval requirements.

03 Surface preparation

Controlled by repair design, ITP, material traceability and client approval requirements.

04 Inspection hold point

Controlled by repair design, ITP, material traceability and client approval requirements.

05 Composite wrapping

Controlled by repair design, ITP, material traceability and client approval requirements.

06 Curing & hardness checks

Controlled by repair design, ITP, material traceability and client approval requirements.

07 Protective coating

Controlled by repair design, ITP, material traceability and client approval requirements.

08 Close-out dossier

Controlled by repair design, ITP, material traceability and client approval requirements.

Composite repair case studies

Engineered cold repair capability for vessels and pipelines - designed, applied and documented.

01 DS8 102-inch upper vessel

Power Sleeve Carbon Fiber composite repair on 27.5 ft axial length; 11 layers; restored MOP to 225 psi.

02 DS7 balance vessel

Power Sleeve composite repair; 12 layers; 4 defects; leak controlled before completing designed layers.

03 36-inch pipeline leak repair

Gas Pruf epoxy and CompoSol composite repair on leaking 36-inch diameter pipe at WQ1 with hardness checks.

Client benefit: reduced hot work exposure, less disruption and engineered asset-life extension where applicable.

Power plant generators & RMU skid packages

Supply, assembly, maintenance and commissioning support for generator packages and RMU skids.

Diesel generator power stations in the 300-1250 kVA range including panels, enclosures and auxiliaries.
Synchronization, load sharing, ATS panels, harmonic filters, fuel systems and DC/UPS support.
PM/CM, overhauls, load-bank testing, troubleshooting and workshop repair capability.
Fabrication, assembly, testing, packaging and supply of ESP RMU skid kiosk substations.
Zubair workshop with overhead crane and equipment for switchgear, RMU and generator works.

300-1250 kVA

Power stations

RMU skids

Supply & FAT

20T

Workshop crane

Testing, pre-commissioning & commissioning

Electrical and instrumentation testing, diagnostics, commissioning checks and energization support.

IR/DAR/PI, VLF/Tan Delta, Hi-Pot, sheath tests, contact resistance and micro-ohm testing.
Transformer TTR, winding resistance, insulation power factor, CT/PT checks and relay testing.
Secondary injection, interlocks, trip circuit health, function testing and energization dossiers.
Instrumentation loop checks, calibration, functional checks and commissioning punch close-out.
Full test packs supported by traceable calibration and project-specific ITPs.

VLF / Hi-Pot

Cable diagnostics

Relay tests

Protection checks

ITR packs

Handover records

Oilfield maintenance & rapid response

Permanent local presence allows BN to mobilize teams, tools and equipment quickly for urgent work.

Preventive and corrective maintenance services for power distribution and generator systems.
Field service response supported by mobile workshops, 4x4 vehicles, cranes, manlifts and Hiab trucks.
CMMS/SAP-ready work orders, PM compliance tracking, asset history and KPI reporting.
Technicians trained for oilfield HSE controls, LOTO, PTW, SIMOPS and task-specific JSA/MSRA.
Warehouses, workshops and laydown yards in Rumaila, Zubair and Basra areas.

Local camps

Rumaila / Zubair

Fleet

Rapid mobilization

PM / CM

Maintenance model

HSE culture for hydrocarbon facilities

BN executes work under oilfield safety controls with clear accountability from management to field teams.

Leadership commitment to safe execution, risk reduction and worker engagement.
Permit-to-work, SIMOPS coordination, LOTO, lifting controls and electrical safety procedures.
Task-specific JSA/MSRA, toolbox talks, PPE compliance and supervision of critical activities.
HSE reporting, incident prevention, emergency response and client procedure compliance.
ISO 45001 / ISO 14001 integrated system framework.

Safety in execution is a delivery requirement, not an administrative activity.

Quality assurance & documented handover

Structured quality controls, ITPs and close-out records to satisfy client requirements and audits.

Quality system aligned with ISO 9001:2015 and project-specific quality plans.
Inspection and Test Plans, hold points, checklists, NCR control and material traceability.
Calibration records, test certificates, as-built markups, red-line drawings and final dossiers.
QA/QC coordination across civil, structural, electrical, automation, mechanical and repair works.
Client reporting, handover packages, GOC/MC1/SH1 documentation where applicable.

Engineering and technical coordination

Technical coordination across electrical, instrumentation, automation, mechanical and civil disciplines.

- Electrical engineering: power distribution, cable sizing, SLDs, protection interface and earthing details.
- Instrumentation and automation: control panels, I/O lists, loop drawings, SCADA interface and field calibration support.
- Mechanical and piping: equipment interfaces, supports, tanks, auxiliary systems and field coordination.
- Civil and structural: foundations, trenches, duct banks, steel works, supports and site restoration.
- Document control: drawings, method statements, ITPs, MTOs, procurement submittals and as-built dossiers.

Corporate organization structure

Management accountability and project delivery lines for BN Company.

The structure provides executive oversight, functional assurance, project control, HSE leadership and dedicated project execution teams.

Engineering organization interface

Typical project engineering coordination model supporting design review, procurement and field execution.

Project Manager and Engineering Manager coordinate discipline leads, document control, procurement interfaces and HSE design reviews.

Facilities and support infrastructure

BN has a real operating footprint in Basra oilfield areas to support large contracts.

No. #	Name of Facility	Year Established	Distance from Rumaila	Type of Facility	Address
1	BN Company Head Office	2021	70 Km	Management, Procurement, and Engineering for Oil& Gas Contracts	Al Muhandiseen district Near AL Khaleeg Fuel Station Zubair Street Qibla, 61003 Basrah, Republic of Iraq

Equipment, machinery and fleet

Contract execution supported by company-owned equipment, workshops and field logistics.

- Cranes, Hiab trucks, lifting equipment, manlifts, forklifts and project vehicles.
- Mobile workshops, tooling, power tools, cable pulling equipment and field support kits.
- Laydown yards, warehouse material control and project-specific storage areas.
- Workshop facilities for fabrication, maintenance, RMU/switchgear and generator works.
- Mobilization capability for simultaneous work fronts across Basra oilfield locations.

Fleet

Field logistics

Workshops

Fabrication & repair

Yards

Material control

Inspection, measuring and testing equipment

Specialized instruments for electrical, control, fiber optic and commissioning works.

- VLF, Hi-Pot, insulation resistance, earth testers, micro-ohm meters and multifunction testers.
- Primary/secondary injection, relay testing, protection verification and power-quality analysis.
- OTDR, fusion splicers, optical power meters and fiber inspection tools.
- Instrument calibrators, pressure/temperature calibrators, loop calibrators and communicators.
- Traceable calibration records used to support formal test packs and handover dossiers.

PETRONAS Emerson Vibration Analyzers	PETRONAS	Supply, engineering, installation and commissioning of analyzers	USD 207,899 / Completed

General Civil Construction & Maintenance Works

Civil execution capability proven under Eni Iraq contract 5000024314 in Zubair Oilfield.

Contract No. 5000024314 - General Civil Construction and Maintenance Works.

Client: Eni Iraq B.V. | Location: Zubair Oilfield, Basra | Duration: Sep 2023 - Aug 2026.

Scope includes general civil construction, maintenance, excavation, concrete, foundations and related services.

Execution under oilfield HSE, quality assurance, permitting, work order and documentation requirements.

Approximate value: USD 8M; status: ongoing.

ESP wells power station systems

Major power station contract demonstrating BN capability in generators, maintenance and workshop support.

Contract 5010004706 - Integrated Supply & Maintenance Services of ESP Wells Power Station Systems.
Station Systems.
Supply and support of 300-1250 kVA diesel generator power stations, panels, enclosures and auxiliaries.
Preventive, corrective and predictive maintenance, overhauls, field support and workshop services.
Power station scope includes synchronization, harmonic filters, fuel systems and load testing support.
Approximate value: USD 55M; status: ongoing.

RMU skids and power distribution projects

Experience in packaging, testing and delivering power distribution assets for major oilfield operators.

CN103899 - Master Agreement for ESP RMU Skid Kiosk Substations for ROO / Basra Energy.
Fabrication, assembly, testing, packaging and supply of complete ESP RMU skid kiosk substations.
5010005821 - Electrical Instrument and Power Distribution for Eni Iraq in Zubair Oilfield.
Scope includes DG power stations, 33/11 kV GIS switchgear, HVAC, firefighting, DC UPS and instrumentation.
Combined ongoing contract value highlighted in the profile: USD 75M.

OHTL, substations and field power networks

Construction, tie-ins, maintenance and upgrades for oilfield electrical networks.

33 kV overhead power line from national grid to CPF1 for TotalEnergies Ratawi AGUP Phase 1.

1.

EPC ESP OHTL ring main programs in Rumaila across multiple project phases.

6.6/11/33 kV OHL maintenance and EPC tie-ins, stringing, sagging and hardware replacement.

Substation extensions, modifications, RMUs, ring switches, feeder additions and as-built updates.

OPGW/fiber support, OTDR checks and telecom cable works where required by the project.

Oil & gas clients and operating areas

Experience with major oil and gas operators, brownfield sites and production-critical infrastructure.

Key clients referenced: Eni Iraq B.V., Basra Energy Company Ltd. / ROO, TotalEnergies EP Ratawi Hub Ratawi Hub and PETRONAS Carigali Iraq Holding B.V.

Operating areas: Zubair Oilfield, Rumaila Oilfield, Ratawi Oilfield, Garraf Oilfield and Basra hydrocarbon facilities.

Strong focus on electrical power systems, ESP surface facilities, OHTL/ring-main networks, civil works, maintenance, commissioning and specialist repairs.

Local Iraqi contractor able to align with international client procedures, HSE requirements and quality expectations.

Future expansion and technology partnerships

Investment priorities aligned with client demand for faster delivery and more local capability.

Strategic JV/MoU with international EPC/OEMs for protection, commissioning, IEC 61850/SAS, SCADA and SCADA and MV/LV switchgear.

33-132 kV OHTL & OPGW capability development with training, procedures and specialized tools.

BN workshop upgrade: 33 kV switchgear service bay, FAT area and calibration corner for meters and torque tools.

Fabrication and assembly line for E-Houses, RMUs, substations, switchgear, control/UPS/DC panels and generator packages.

Composite repair growth supported by specialist partners, trained team members and available repair materials/equipment.

Ready to support your major oil & gas contracts.
